Foley catheter insertion guidelines

Table 1. Indications for Foley Catheter Use

APPROPRIATE INDICATIONS FOR A FOLEY CATHETER	INAPPROPRIATE INDICATIONS FOR A FOLEY CATHETER
<ul style="list-style-type: none"> • Acute urinary retention or bladder outlet obstruction. • To accurately measure urinary output in critically ill patients. • To provide urine for culture and sensitivity testing, urine drug testing, or urine toxicology testing. • To provide urine for testing or culture in patients who voluntarily void. 	<ul style="list-style-type: none"> • For incontinence, as a substitute for other patient care. • To obtain urine for testing or culture in patients who voluntarily void.

INFECTION CONTROL

BARDEX® I.C.

ANTI-INFECTIVE FOLEY CATHETERS WITH BACTI-GUARD™ SILVER ALLOY COATING AND BARD® HYDROGEL

Silver Alloy Impregnated Foley Catheter Trays designed to follow CDC Guidelines for the prevention of CAUTI

1. BARDEX® I.C. Silver Alloy Impregnated Anti-Infective Foley Catheter

- The BARDEX® I.C. Foley Catheter with Bacti-Guard™ silver alloy coating and Bard® Hydrogel is clinically proven to reduce catheter-associated urinary tract infections (CAUTIs).

2. SixtLock® Foley Catheter Stabilization Device

- The SixtLock® Foley device minimizes movement, pistoning, and risk of accidental dislodgement of the Foley catheter. By design, the SixtLock® Foley stabilization device follows the CDC category IB recommendation to properly secure indwelling Foley catheters.

3. EZ-LOK® Sampling Port

- The EZ-LOK® Sample Port is totally needle free and its unique locking system is compatible with luer lock and slip tip syringes.

4. Tamper Evident Catheter and Drainage Tubing Junction Seal

- Bard's Tamper-Evident Seal minimizes the risk of system contamination. The seal provides a clear indication of system opening and serves as a reminder to caregivers to keep the system closed.

5. Bacteriostatic Drainage Tubing

- The bacteriostatic drainage tubing in the BARDEX® I.C. Complete Care™ System contains a unique antimicrobial agent that repels many common Gram-positive bacteria, Gram-negative bacteria, and yeasts.

6. Bacteriostatic Collection Bag

- The bacteriostatic collection bag in the BARDEX® I.C. Complete Care™ System is impregnated with a novel antimicrobial agent that resists pathogens commonly associated with CAUTIs.

7. Anti-Reflex Chamber

- The domed anti-reflex chamber helps prevent urine reflux back into the drainage tubing while simultaneously providing an unimpeded drainage path to ensure the unobstructed evacuation of clots and debris.

8. Drainage Bag Outlet

- The microbicide outlet tube in the BARDEX® I.C. Foley Trays creates a zone of inhibition against the most common organisms that put a patient at risk and protects against retrograde bacterial migration.

URINARY CATHETERISATION AND CATHETER CARE GUIDELINES

The Society for Healthcare Epidemiology of America (SHEA) Compendium set forth a set of written guidelines for foley catheters:

- Use
- Insertion
- Maintenance

INDWELLING URINARY CATHETER INSERTION RECORD – ACUTE CARE	
Patient Name: _____ MRx	
Reason for catheterisation: _____	
Insertion date: _____	Volume of urine drained: _____ mL
Insertion time: _____	CSU collected: <input type="checkbox"/> Yes <input type="checkbox"/> No
Catheter: <input type="checkbox"/> IDC <input type="checkbox"/> SPC	Catheter abused (Tick 1 only):
Catheter size: _____ Fr	<input type="checkbox"/> Tug
Anesthetic gel used: <input type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Other, describe: _____
Lubricant used: <input type="checkbox"/> Yes <input type="checkbox"/> No	Drainage system (Tick 1 only):
H ₂ O in balloon: _____ mL <input type="checkbox"/> N/A	<input type="checkbox"/> Bag, describe: _____
Difficulty/abnormality observed at insertion: <input type="checkbox"/> No <input type="checkbox"/> Yes	<input type="checkbox"/> Valve
If Yes, describe: _____	
Planned catheter review/removal date (circle required option): _____	
Inserted by: _____	Signature: _____
Designation: _____	Unit: _____

separate, clean container should be used for each person. Look at the catheter and drainage bag to see if the urine is darker, the child should drink water every day. Make sure the child is in the clean diaper or towel and that the genitals are clean of feces. Insert the Foley catheter until it reaches the “Y” of the catheter. Remove the syringe from the catheter and press the water into a sink or sink. Place the pipe under the tap and rinse with cold water. Slowly inflate the balloon with the attached syringe, using the correct amount of water indicated on the tip of the catheter in ml, then disconnect the syringe from the Foley. The urinary drainage bag should be emptied frequently enough to maintain urine flow and prevent reflux, and should be changed when clinically indicated. The urine should be light coloured to pale. Drain the urine in the toilet. Gently pull the syringe to extract the water that was on the ball. Carefully pour pour vinegar and water solution into the tubing and move around for 30 seconds. Open the Foley catheter and lubricate generously with the lubricant. Some patients, including those with spina bifida or urinary retention problems, may be asked to use a Foley catheter at night. Usually about five to10ml of water will come out of the balloon. Caregivers should have: A clean, dry Foley catheter A water-soluable lubricant like K-Y jelly. The person’s clinical need for catheterisation should be reviewed regularly and the urinary catheter removed as soon as possible. [Adapted from NICE’s guideline on healthcare-associated infections and epic3: National evidence-based guidelines for preventing healthcare-associated infections in NHS hospitals in England] Putting a Foley catheter into the patiente’s’s bladder allows urine to continually drain and keep the bladder empty. Place the drainage bag below the level of the bladder to prevent urine from flowing back into the bladder. Urinary drainage bags should be positioned below the level of the bladder, and should not be in contact with the floor. Those who need Foley catheters will learn how to use the catheter during a CHOC Urology Center visit. Indwelling catheters should be connected to a sterile closed urinary drainage system or catheter valve. Cleaning Urine Drainage Bags Prepare a solution using 50% of white vinegar and 50% of water and set aside close to where the urine drainage bag will be cleaned. Urine samples must be obtained from a sampling port using an aseptic technique. technique.

Symptomatic catheter-acquired UTI is uncommon in patients with short-term indwelling catheters. In a prospective cohort study of 1497 acute care patients with a new short-term catheter insertion, fever, dysuria, urgency, or flank pain were identified as frequently in patients with as without bacteriuria. Urethroplasty is the repair of an injury or defect within the walls of the urethra.Trauma, iatrogenic injury and infections are the most common causes of urethral injury/defect requiring repair. Urethroplasty is regarded as the gold standard treatment for urethral strictures and offers better outcomes in terms of recurrence rates than dilatations and urethrotomies. 02/05/2017 · Urinary tract infection (UTI) as the most common healthcare-associated infection accounts for up to 36% of all healthcare-associated infections. Catheter-associated urinary tract infection (CAUTI) accounts for up to 80% of these. In many instances indwelling urinary catheter (IDC) insertions may be unjustified or inappropriate, creating potentially avoidable and ... A closed catheter drainage system is an aseptic system in which the path from the tip of the catheter inserted into the bladder, to the bag which catches urine, is closed and should not be disconnected. This structure is designed to eliminate inoculation of the urinary tract with bacteria via the catheter drainage tubing and from the collection ... 16/09/2021 · A urinary catheter, or Foley catheter, is a thin, flexible tube that allows your urine to drain directly from your bladder to a small bag outside your body. Removing a catheter is a fairly simple procedure. Most people have little... CPT® code 51701: Insertion of non-indwelling bladder catheter (e.g., straight catheterization for residual urine): This code is used when a non-indwelling bladder catheter is inserted and immediately removed after urine is obtained for diagnostic purposes, i.e., sterile urine specimen (commercial payers only) or a post-voiding residual urine (commercial or Medicare).
