Catalog IK PI Edition 2015 By Sergio Guerrero Protective relays guide SCHNEIDER By Xavier Pastor Pamies Products for Totally Integrated Automation Answers for industry. Catalog ST 70 Edition 2013 By Gerardo Yepes READ PAPER Download pdf. This page provides a brief overview of the range but please contact us for any additional information you require and to allow us to assess your precise needs from the ComAp NT range. The family of models provides a wide choice of control features and user configurability options. The controller is intuitive to handle and easy to configure. Like all ComAp products, InteliLiteNT MRS models feature a powerful graphic display providing userfriendly information in an easy to understand format. The four standard MRS models are identified by a number, which defines model capability. InteliLiteNT can communicate via CAN J1939 or Modbus communication protocols to a wide range of EFI engines, which include Caterpillar, Cummins, Deutz, Detroit Diesel, GM, Iveco, John Deere, Perkins, Scania, Sisu, Volvo Penta and others. Detachable construction consisting of ISNTBB and ISDisplay or InteliVision 8 allows easy installation with the potential for many different extension modules designed to suit individual customer requirements. A builtin synchronizer and digital isochronous load sharer allow a totally integrated solution for gensets in standby, island parallel or mains parallel. Native cooperation of up to 32 gensets is a standard feature. InteliSysNT supports many standard ECU types and is specially designed to easily integrate new ones. A powerful graphic display with userfriendly controls allows any user, whatever their ability, to find the information they need. The display on the basic version is capable of displaying graphical languages e.g. Chinese. Compact construction makes the unit ideal for these applications and HW modifications allow customers to select the perfect solution to meet a particular requirement.

A builtin synchronizer and digital isochronous load sharer allow a total integrated solution for gensets in standby, island parallel or mains parallel. Native cooperation of up to 32 gensets is a standard feature. InteliGen NT supports many standard ECU types and is specially designed to easily integrate new ones. A powerful graphic display with userfriendly controls allows any user, whatever their ability, to find the information they need. The InteliMainsNT controller connects the

group of gensets to the mains. It can serve as a bustie synchronizing controller between two groups of gensets. InteliMainsNT provides 3 applications for different site topology with MCB Mains Circuit Breaker, with MCB and MGCB Master Generator CircuitBreaker or with BTB Bustie Breaker. According to the type of application, it controls MCB, MGCB or BTB and it allows reverse synchronizing of the genset group operating in multiisland mode to the mains MCB application, to another group of gensets BTB application or forward synchronizing of the gensets MGCB application. InteliMainsNT controller is equipped with a powerful graphic display featuring icons, symbols and bar graphs for intuitive operation, which together with high functionality sets new standards in genset control. With a proven track record of working in the most demanding environments, InteliDrive controllers deliver unparalleled command, control and communication advantages. In order to reflect the needs of our customers, we continue to expand and refine our product portfolio", says Jiri Dunovsky, Director of ComAp's Industrial Power Generation division. "That is why we have developed a new generation of genset controller, the InteliGen 200, that represents a scalable solution bringing the best of stateof theart technology to our customers in a way that reduces complexity and enables intuitive configuration and operation. Compatibility, flexibility and dependability With all basic functions predefined, customers can easily add and configure necessary PLC blocks themselves using the intuitive PLC editor. The expansion and communication modules are designed to fit inside the controller itself, which not only reduces the space needed in the panel, but most importantly allows the customers to only select modules they really need. This also allows for easy future expansion of the controller instead of replacing the controller entirely, should the customer's needs change. Thanks to the integrated AVR interface and basic group signals shared via CAN, less wiring is required. The integrated USB port not only ensures better connectivity, but also enables configuration when standard power supply is unavailable. Improvements also include increased accuracy of voltage, current and power measurement.

An RS 485 interface has also been integrated enabling a high level of system monitoring. "Enabling switching between two applications, InteliGen 200 is a perfect solution for rental companies, too," states Jan Donat, Product Manager, and specifies that single genset in parallel to mains is equipped with functions such as auto mains failure start or peak load shaving. Thanks to manuals incorporated directly into InteliConfig and a context sensitive hint feature, customers have always help at hand. By showing configuration and monitoring on one screen, InteliConfig is also perfect for easy commissioning. Do NOT follow this link or you will be banned from the site.
